Posting To Prose

Contents

Getting Your Thoughts Out There

A new way to share the discussion among your group.

1. Sign Up for a Prose.io account
2. Get a Github account
3. Connect your account to your Github repo.
4. Open the repo folder which you are asked to post to.
5. Begin a new file, enter your content.
6. Commit your content by naming in the file name bar and click save.

Prose and Github

What you need to know about how Prose works with Github.

Everything posted onto Prose.io, if that account is connected to a repo on Github for the other members of your group to view and make comments on.every time they make a change, they are effectively submitting a new document into Github. They will still be then able to see past versions of their document on the site, but any comments made on the previous submissions will be left with that version of the document.

Here are some other reasons you may not see what you expected on Github.

• If there is an extended line of content which appears as though it was supposed to be a paragraph, that paragraph may not be aligned properly in the Prose file.
• Headings work by using the #, two being an H2 and three being an H3.
• Be sure you are abiding by the rest of the Prose language, accessible in the WYSIWYG bar on top of the open file.
• Every so often it may be necessary to Authorize Your Account on Github.
