Posting with Prose.io

Contents

Create a post with Prose.io

These steps will guide you through the process of creating a text file in GitHub using Prose.io

1. Open your internet browser
2. Log into github.com
3. Lot into Prose.io with github authorization
4. Navigate to appropriate directory/team folder
5. Click "new file" and compose text in GH markdown
6. Rename file using format: "LastName-FirstInitial-Wk#"
7. Click "save" and "commit" to publish to GitHub

The Prose.io editor

A brief explanation of Prose.io

Prose.io is an editor for GitHub. When you authorize Prose.io with your GitHub account, it shows all of your GitHub repositories. When you create or edit a file with Prose.io, all changeds are commited to the directory that you specified. This means that you must have a GitHub Account to use Prose.io, as it does not actually store any files itself.

You can think of Prose.io as a text/markdown editor (like the one you'd use on your computer) that takes care of uploading/commiting your files to GitHub for you.

Basic Markdown Tags

Some basic GitHub Markdown tags to get you started with creating a post in Prose.io

Tag	Notes
#This is an H1	Use for post title
##This is an H2	Use for subheads
>This is a blockquote	use to mark longer quotes
This text is italic	Use to reference book titles
This text is bold	use to emphasize terms
